

FIRE/EMSMAPPING

What Is It?

INTERMap™ is EmergiTech's map data solution. It was created to provide emergency communications centers with a vital additional layer of location information.

What Does it Do?

INTERMap™ is a fully integrated mapping solution that works with INTERCad™ computer aided dispatch software to display the location of calls, responding units and their current status. Optional integration with AVL will provide real-time unit locations.

How Can It Help Me?

Modern day emergency response requires increased levels of preparedness. One way to enhance your agency's level of preparedness is by equipping your dispatchers and first responders with more information. INTERMap™ helps you meet this need by helping you:

- Quickly assess situational status via a high-level graphic snapshot of activity
- Easily install and utilize your current mapping data
- Seamlessly interface with the INTERCad™ computer aided dispatch system
- Run on single-user workstations or vast multi-user networks through flexible licensing options
- Enjoy the platform stability of Microsoft Windows®
