

MUGSHOTIMAGING

What Is It?

INTERMug™ is EmergiTech's mug shot imaging software. Designed to help agencies with the need to manage growing amounts of mug shot data, it offers a convenient and comprehensive solution.

What Does it Do?

INTERMug™ collects and manages digital booking photos. When combined with EmergiTech's INTERBADge™ and INTERSLam™ records and jail management software solutions, it allows for photo arrays with stored photos, while robust querying eliminates the need for manual image searches.

How Can It Help Me?

Manage massive amounts of digital image data in one secure system. This software helps you:

- Eliminate the need to store large amounts of hard copy photos. Manage a digital image library to save time and space
- Forgo tedious manual image searches. Instead, use easy search parameters to quickly find the image you need
- Create and save digital photo arrays for future use
- Store multiple photos of persons to create chronological photo histories for offenders
- Easily produce printed copies of photos for evidentiary needs
- Run on single-user workstations or vast multi-user networks through flexible licensing options
- Continue to grow. There is no limit to the amount of records the system can organize and store
- Enjoy the platform stability of Microsoft Windows®
