

COMPUTERAIDEDDISPATCH

What Is It?

INTERCad™ is EmergiTech's computer aided dispatch solution. Developed through years of experience meeting the needs of emergency communications centers, it is optimized to allow for quick and efficient call processing and decision-making.

What Does it Do?

INTERCad™ is a streamlined decision support and resource tracking tool which makes communications center operators more efficient and better informed. For a single agency or multijurisdictional response, previous incident information, response guidelines and unit recommendations aid staff in decision-making. This decision support helps save lives, property and time.

How Can It Help Me?

INTERCad™ can help your emergency communications staff quickly and effectively make decisions. A robust set of features help your agency to:

- Drag and drop calls for easy data manipulation
- Easily see important data with color-coded call and unit status
- Quickly retrieve call histories and response times
- Record times of activity with no manual data entry needed
- Unify staff with dispatch terminals that refresh simultaneously. All dispatchers see the same information at the same time
- Track traffic stops and radio logs
- Safeguard data through password security controls
- Print easy-to-read statistical reports
- Fully integrate your records management, CAD and mapping functions. INTERCad™ works with INTERBADge™ and INTERMap™ to create a seamless solution
- Save dispatchers time by adding an optional ANI/ALI interface
- Run on single-user workstations or vast multi-user networks through flexible licensing options
- Continue to grow. There is no limit to the amount of data the system can organize, manage and store
- Enjoy the platform stability of Microsoft Windows®
