

FIELDREPORTING

What Is It?

INTERLink™ is EmergiTech's field reporting solution. This product gives officers in the field the ability to complete reports and later transfer data into the main records management system, allowing officers to spend more time fighting crime on the streets than completing paperwork at the precinct.

What Does it Do?

INTERLink™ allows users to complete reports for later transfer into the INTERBADge™ records management system. Time is saved and accuracy is ensured with the collection of information as it is received in the field. This system is the ideal field-based reporting solution for agencies that do not have a wireless data network.

How Can It Help Me?

With INTERLink™ officers in the field utilize a laptop to take reports in the field. They later upload those reports into the main records system. This solution helps your agency:

- Ensure accuracy of data. Officers can complete reports at the scene when information is fresh and readily available
- Increase productivity. Officers can spend more time on the streets as opposed to filing reports back at headquarters
- Access a stored version of Master Name Database and Common Business Location file
- Complete the following types of reports: field interviews, parking citations, traffic crash reports, traffic citations and offense information
- Review lists of warrants
- Submit reports via secure network connection when officer is back at headquarters
- Eliminate data entry redundancies
- Avoid the expense of a full wireless network
- Enjoy the platform stability of Microsoft Windows®
